

*BPI-recognized training is based on building science principles and the “house-as-a-system” approach. The whole-home assessment allows the Envelope Professional to locate and diagnose problems at the source and prescribe real solutions that not only improve energy efficiency and lower utility bills, but also protect the homeowner’s comfort and health and safety—including indoor air quality and mold prevention.*

**BPI ENVELOPE PROFESSIONAL** is just one of the training solutions offered by Utilivate:

- *BPI Building Analyst Professional*
- *BPI Building Envelope Professional*
- *Combined BPI Building Analyst Professional & Envelope Professional courses*
- *Customize, on-site delivery of BPI training*

## BPI Envelope Professional: Certification Training

Utilivate Technologies is a leading energy management services firm specializing in contractor education, training, and certification and has worked with state weatherization programs and electric and gas utilities throughout the United States.

Utilivate uses its “Whole-House” approach to BPI Envelope Professional performance-based training through its proven Home-PWR® Three-Step Program:

### Home-PWR® Three-Step Program

- Step 1:** BPI Envelope Professional workshop provides “hands-on”, highly-interactive instruction. Our dynamic, expert presenters have literally years of experience in building performance, energy management, and home retrofits.
- Step 2:** Comprehensive field training is performed in actual homes with high-tech instruments; including, one-on-one coaching and small group instruction.
- Step 3:** Participants are prepared to challenge the BPI Envelope Professional written and field exam. Online certification testing is included in the workshop price. Separate registration and payment is required for field testing.

### Immediate Program Impact

- Workshop enables a “fast track” path to Envelope Professional certification; “jump start” your business...beat and fly ahead of your competitors.
- Credentials to join select list of preferred, certified contractors able to perform on the Illinois Home Performance with Energy Star® incentive program and other Illinois, county, municipal, and utility residential energy efficiency programs.
- Opportunity to enhance skills in addressing a building envelope’s thermal and pressure boundary issues through insulation and airsealing techniques.
- Chance to increase knowledge and awareness of different building envelope types, advanced thermal and air pressure boundary diagnostics, psychometrics and relative humidity, building airflow and pressure pan testing, and mechanical ventilation systems.
- Invitation to ongoing, “free” Lessons Learned & Best Practices forums for Home-PWR® alumni.
- Information-packed resource book is provided to participants and includes all training material, check-lists, case studies and other references to support and “jump start” your home performance services.

### Who should attend?

- BPI Building Analysts, HVAC Professionals, Insulation Professionals, Home Inspectors, HERS Raters, General Contractors, Home Builders, Engineers, Architects and more...

**Pre-requisite:** In most cases it is required that the participant be a BPI certified Building Analyst (experience and/or a similar certification may make the participant exempt from this pre-requisite).
